

## how to be redirected to the previous page using response.redirect() in asp.net c#

[Ask Question](#)

▲  
9 Right now i have a folder with another folder inside of it.  
The two folder names are called "pc details" and  
"pchardwaredetails"

▼  
★  
3 When on a page in "pchardwaredetails" i want to return to  
a page in "pc details" using a button and  
response.redirect() but the file paths are just getting too  
complicated for me. What might the file path be from a  
page called "Details" in "pchardwaredetails" to a page  
called "viewMore" in "pc details"?

Also please feel free to explain how paths work so i know  
for future

thanks

c# html asp.net

### 1 Answer

Usually the `Request.UrlReferrer` of the page (a HTTP header) tells

```
Response.Redirect(Request.UrlReferrer.ToString());
```

That's assuming you came from PC Details . However if you land on PC Hardware Details from some other page then that won't work, you would have to hard code the back feature.

You can simplify ASP.NET paths and use ~ , for example:

```
Response.Redirect("~/some/path/pc_details.aspx");
```

Would this work if you were also going forward from the same page though? i mean in theory you could have multiple entry points into the same page – [Master Yoda](#) Jun 27 '13 at 9:25

- 2 @user2500842 Yes that won't work if you come from other pages, you'd have to hard code the back feature to go to the page you want. – [Lloyd](#) Jun 27 '13 at 9:58
