

Magento admin panel not loading properly no options for login

[Ask Question](#)

1

I setup fresh Magento 2.3 setup in my localhost. Frontend show properly but backend no options show login. Admin panel not loading properly.

- I clear all caches but admin panel not loading

This is a path issue.
try editing the

- 3
▼ Validator file from
vendor folder with
namespace
- Magento\Framework
View\Element
Template\File**
- At around line **138**
replace code with this
one
- ```
$realPath = str_replace
```
- save then  
**cache:flush**
- Then check if it works.  
Hope it helps

▼ Could you please  
check What error you  
got in the error.log  
file? Enable the  
developer mode by  
using the command  
**bin/magento  
deploy:mode:set**

**developer you can  
get the error in  
screen itself** if you  
enable the developer  
mode.
