How can put MaintainScrollPositionOnPostBack=True in a WebPart

SharePoint >

SharePoint Legacy Versions - Using SharePoint Designer, InfoPath and Other Customizations

Question

Alert me

Vote

I have a page with two webparts with connected lists. I want to fix the scroll of webpart if I select one item from one list.   Else I must always scroll the webpart to find the next item. I have found in internet a command "MaintainScrollPositionOnPostBack=True", but I can only put it in the page. How can I put in in two webparts?

Moved by   Mike Walsh FIN   Friday, September 2, 2011 10:47 AM   customization (?) (From:SharePoint - Setup, Upgrade, Administration and Operation (pre-SharePoint 2010))

In a web part

this.Page.MaintainScrollPositionOnPostBack = true;

In the web.config of web application.

```
<system.web>
  <pages maintainScrollPositionOnPostBack="true">
  </pages>
</system.web>
```

Hello,

I have put it in web.config, but I get the error:

<!-- Web.Config Configuration File -->

```
<configuration>

    <system.web>

        <customErrors mode="Off"/>

    </system.web>

</configuration>
```

Notes: The current error page you are seeing can be replaced by a custom error page by modifying the "defaultRedirect" attribute of the application's <customErrors> configuration tag to point to a custom error page URL.

```
<!-- Web.Config Configuration File -->
```

```
<configuration>

   <system.web>

      <customErrors mode="RemoteOnly" defaultRedirect="mycustompage.htm"/>

   </system.web>

</configuration>
```

Hi,

Could I confirm with you that you added this.Page.MaintainScrollPositionOnPostBack = true; to the CreateChildControls() method of your custom web part. To the web.config file, find pages tag in <system.web> section, add maintainScrollPositionOnPostBack="true" in the tag and save.

Thanks,
Qiao Wei
