# How to pass query string to user Control

**See more:**   Javascript   Ajax

Rate this: ★★★★★

Hi,

I sm trying to develop a user control.

In which ,i am using AjaxModalPopextender.

I want to show list of values in that User Control.

But I want to use this control for most of the forms so i am creating a dynmaic user control.

So can anybody suggest how to pass parameters to user control by using querystring or in any other way.

Thanks in advance

The best way to pass data to a user control would be to have public properties. For example:

Hide   Copy Code

```
public partial class PopupControl : System.Web.UI.UserControl
{
```

```
    public string DisplayValues { get; set; }
}
```

So, now when you are using this control, you can do something like:

```
<uc:popupcontrol  runat="server" id="popup1" displayvalues="some values" xmlns:uc="#unknown" />
```

Similarly, if you are dynamically creating these controls (as you say in your question):

```
PopupControl popup = LoadControl(src);
popup.DisplayValues = "some values";
```

This article pretty much explains this in detail - Dynamic Loading of ASP.NET User Controls[^]

Of course any query string can also be accessed in a user control just like in a aspx page, but the cleaner way of doing this is with user control properties.

Hope this helps!

Thanks for this solution.

I am using now user control properties.

But now i want to access those properties in Javascript

U have any idea, how to access those propeties in Javascript?

Thanks in advance

You build the html from the properties you pass right? You will have to use them. For example, say are passing 3 values to the user control and you display it as <div>value 1</div><div>value 2</div><div>value 3</div>, attach some class to it like <div class="values">value 1</div><div class="values">value 2</div><div class="values">value 3</div>. Then using jquery you can get the values as $('.values') - which will be an array of 3 values. If you post the content of your .ascx file, I can help, looking at the html generated.
